

A deeply unstable airmass covers much of southern England. As daytime heating gets going, we can expect showers and thunderstorms to break out and to be slow-moving at times, given light winds. 10-15 mm of rain will occur in less than an hour in places with some 25 mm possible in 3 hours or less. As is usual with these situations, some places will miss the worst of the rain.

Valid from **12:45 on Tue, 29th Apr 2014** until **20:00 on Tue, 29th Apr 2014**

The public should therefore be aware of the risk of localised flooding. In particular surface water could lead to difficult driving conditions at times. Hail and lightning are likely to provide an additional hazard locally.
